**Green Is In The Details**  
***Details Produces High-Quality, Custom-Level PreFabGreen Homes for All***

Sacramento, CA – November 19, 2007 – Building a green home is the wave of the future; it is also the only simple, responsible choice to make when it comes to investing in new construction, according to the experts at Details - Homes of Architectural Distinction. Details builds high-quality, custom-level PreFabGreen homes for today's new breed of discriminating, environmentally responsible home buyers. From design to construction, each home is planned to provide energy efficiency, conserve natural resources and create a healthy atmosphere for homeowners.

"It is important to us to create sustainable, healthy homes and communities. Building an environmentally responsible house is the sensible way to construct a home that is as comfortable for the owners as it is for our environment," said Mark Wintz, president of Details. "We are very pleased that we have been able to locate Details factory in a mixed use urban environment to provide employees affordable housing options and many quality of life services that are within walking distance to work. I love getting up in the morning and walking to work without having to get in a car."

Constructed off-site to the UBC/IBC code in a decommissioned aerospace facility in Sacramento, Details delivers homes directly to small developers' sites throughout California and the Pacific Northwest. The Details PreFabGreen program includes conserving energy, reducing resources and creating a clean comfortable home in which to live.

With the combination of SIP panels using younger, sustainably-grown trees for the main structure of the house, open and closed cell spray foam insulation, tankless water heaters and Manabloc/pex water delivery systems, Details produces homes that provide energy efficiency and water savings significantly beyond required city codes. Conserving EnergyStar appliances are also installed throughout Details homes to reduce energy consumption and increase efficiencies.

As precision-made constructed homes, Details eliminates the excessive use or waste of materials in the building process. Scrap metal is recycled. And LEED certified, low VOC paint is available throughout all houses.

“By constructing our homes off-site, Details is significantly reducing the noise, dust and damage to existing site landscapes. Neighbors and community residents appreciate this benefit,” said Bruce Evans, vice president of Details. “Plus, off-site construction reduces carbon gas emissions from driving to and from the construction sites. Studies have shown that factory workers commute significantly shorter distances than construction workers, many who drive more than 100 miles a day to a job site.”

At Details, green is good. It’s good for clients, homeowners, neighborhoods, global communities and the environment. It’s also the way to increase our quality of life and overall health. Details takes this commitment seriously.
